Introducing
The Entrust Connect-Ed Service

At Link2ICT, we continuously review our services to ensure that we are providing value for money and to ensure you have the tools to deliver teaching and learning both now and into the future. The foundation to enabling any (and all) of this is, of course, your connectivity.

We are pleased to introduce the Entrust Connect-Ed Service in partnership with Exa Education, which will offer schools a range of benefits such as reduced pricing, additional bandwidth options, improved performance and the exclusive and comprehensive wraparound support from Link2ICT that seamlessly weaves between all your subscribed services.

What are your plans for the future?

Our next generation connectivity offering provides a range of bandwidth options which eliminates the need to reinvest in your connectivity later, as you will already be supported by a future-proof solution that is flexible enough and robust enough to grow as you do.

With bandwidth options ranging from 50Mb to 1Gb, even if you have a specific budget in mind, we have a scale of products that offers the flexibility that your school needs. We are also conscious of how important it is for us to provide value for money, and so with a 3-year subscription to our service you can effectively manage your budget and accurately predict your internet expenditure over the next few years.

No added fees!

Because we are always trying to get you the very best products and pricing for your technology, we have partnered with Exa education and have arranged the best possible deal for schools, with no additional costs to transition to the new service.

That’s right:
- No additional hardware costs
- No installation fees
- No added support costs

*excluding any excess construction charges that could apply to the physical installation of the new line from the underlying service provider. However, these charges are unlikely.

Safeguarding children, staff and data

As well as all this, the new connectivity service comes with all the safeguarding, security and data protection requirements expected of schools in line with statutory guidance, which includes:
- A secure private network
- Secure, education focused web filtering and monitoring across your network
- Secure DNS and domain hosting
- Secure VPN access
- Secure firewall services and support

Optional Add-on
- Secure, encrypted access to non-web enabled BCC application - CRISP

Comprehensive support

We are fully aware that knowledgeable and thorough support is equally as important as the service provided, and so by subscribing to the new Link2ICT Connectivity Service, you are also investing in an exclusive and comprehensive support service. Not only do we support your connectivity, but we are expert in the services that form additional layers to your estate, such as your MIS, your safeguarding solutions, and your web and email services - to name just a few. Link2ICT is the one-stop-shop that integrates all your services for a seamless delivery.

Our Service Desk has been supporting schools for nearly 30 years and so we have grown with schools to know exactly what your needs are. We are prepared to support and tackle any issues that you face throughout the school day. So, whatever you need, whatever challenges you face, we have the people, products and expertise to support you.

More information

To find out how your school can benefit from our next generation connectivity service, please contact your account manager for more details.
